**Total observed:**

- **2.5**

**10-Day Total:**

- **0.4**

**Accumulated Observed Precip for WY 2020:**

- **28.4** (WY 2019: 77.3)

**10-Day Percent of Normal:**

- **43%**

**Comments:**

This week in the feather basin should begin cool and clear warming into the week with highs in the 50s, lows below freezing at higher elevations, and prevailing north wind from 5 to 15 mph. Towards the weekend expect mostly cloudy skies with chances of rain lingering from Friday into early next week and a stronger precipitation signal on Monday. Highs may get up to the 70's at lower elevations while lows are expected to remain in the 30's down to freezing at higher elevations. Daily snow level forecasts rise to just above 9000 ft Wednesday and fluctuate between 3 and 5 thousand feet through next Wednesday.
