INTRODUCTION

1-01. Location. The improvement covered by this manual is that part of the San Joaquin River and Tributaries Project levee and channel that is located along the right bank of the Stanislaus from high ground to the San Joaquin River and the right bank of the San Joaquin River from the Stanislaus River to Walthall Slough. The area lies about 4 miles south from the town of Lathrop and 7 miles west from the town of Ripon. Location by levee mileage along the right bank of the San Joaquin River is from mile 0.00 at Weatherbee Lake to 0.17 within R.D. 2096; from mile 0.00 to mile 2.82 within R.D. 2094; from mile 0.00 to mile 7.58 within R.D. 2075; and from mile 0.00 to mile 5.45 (mouth of Stanislaus River) (Unit 1) within R.D. 2064 and mile 0.00 to mile 6.06 within R.D. 2064 (Unit 2) along the right bank of the Stanislaus River to high ground. All mileages listed above progress going upstream. The total is 22.08 miles. The area lies within the above mentioned Reclamation Districts in the county of San Joaquin, California and in the general vicinity as shown on the Location Map, EXHIBIT A-1.

1-02. Project Works. The project works covered by this manual is a part of the Lower San Joaquin River and Tributaries Project as authorized by the Flood Control Act of 22 December 1941, Public Law 534, Seventy-Eighth Congress, Second Session, Section 10, and consists of the right bank and levee of the San Joaquin River from Weatherbee Lake to the mouth of the Stanislaus River; and the right bank and channel of the Stanislaus River from its mouth upstream to high ground; a total distance of about 22.08 miles.

1-03. Protection Provided. Levees along the San Joaquin and Stanislaus Rivers, as described in this unit, provide direct protection to adjacent agricultural land within Reclamation Districts No. 2064, 2075, 2094 and 2096. Along the San Joaquin River right bank levee the grade of the adopted flood plane varies from elevation 23.2 at the lower end (Weatherbee Lake) to elevation 36.2 at the mouth of the Stanislaus River. Along the Stanislaus River the grade of the adopted flood plane varies from elevation 36.2 at the mouth to elevation 49.4 at high ground. All elevations are referred to mean sea level datum (1929 adjustment). Levee grade within this unit provides for a freeboard of at least 3 feet above the adopted flood plane profile. Within this unit the project design flood for the San Joaquin River is 52,000 cubic feet per second and for the Stanislaus River 12,000 cubic feet per second.
1-04. **Construction Data and Contractor.** Work required by the Corps of Engineers to bring levees of this unit to project standards was accomplished under the following contracts:

a. Emergency levee repairs, right and left banks of the Stanislaus River was accomplished under Contract No. DA-04-167-CIVENG-56-216 during the period from 1 May 1956 to 1 August 1956. Specification No. 2137 and Drawing No. 7-4-1495.

b. Emergency levee repairs, right and left banks of the San Joaquin River was accomplished under Contract No. DA-04-167-CIVENG-59-44 by Lee Stephens, during the period from 13 October 1958 to 9 November 1958. Specification No. 2488, Drawing No. 7-4-1568.

c. Bank protection and levee construction along the right and left banks of the San Joaquin River at priority site was accomplished under Contract No. DA-04-167-CIVENG-59-131 by A. Teichert & Son, Inc., during the period from 1 June 1959 to 20 November 1959. Specification No. 2565, Drawing No. 7-4-1588.

d. Levee construction and bank protection, right bank San Joaquin River at mile 62.2 was accomplished under contract No. DA-04-167-CIVENG-63-34 by M. Malfitano & Son, Inc., during the period from 24 September 1962 to 6 November 1962. Specification No. 2895, Drawing No. 7-4-1671.

e. Levee construction and bank protection on the right bank of the San Joaquin River from north levee of R.D. 2075 to Walthall Slough was accomplished under Contract No. DA-04-167-CIVENG-62-68 by Jack Campbell, Inc, during the period from 8 June 1962 to 30 August 1963. Specification No. 2735, Drawing No. 7-4-1643.

f. Levee construction, right and left banks of the San Joaquin River between Stanislaus River and north line of R.D. 2075 was accomplished under contract No. DA-04-167-CIVENG-66-103 by Elmer G. Wendt, Inc., during the period from 28 March 1966 to 10 March 968. Specification No. 3042, Drawing No. 7-4-1685.

g. Completion Phase, right and left banks of the San Joaquin River and Stanislaus River was accomplished under Contract No. DACW05-68-C-0086 by Elmer G. Wendt, Inc., and completed on 14 November 1968. Specification No. 3455, Drawing No. 7-4-1710.

h. Stone protection on the right bank of the San Joaquin River at Site Mile 71.6, Reclamation District 2064 (under Authority PL 99) was accomplished under Contract No. DACW05-71-C-0125 by Wayne Bailey Trucking, Inc. during the period from 12 July 1971 to 27 July 1971. Specification No. 4113, Drawing No. 7-4-1789.

i. Emergency repairs (PL 84-99) to the right bank of the San Joaquin River consisting of reconstruction of approximately 1000 feet of levee in Reclamation District 2064 were completed on 20 November 1980 under Contract No. DACW05-81-C-0021. Specification No. 5985, Drawing No. 7-4-1838.
j. Levee restoration along the right bank of the San Joaquin River upstream of Airport Way was completed on 11 April 1983 under Contract No. DACW05-83-C-0084. Levee restoration along the right bank of the San Joaquin River downstream of Airport Way was completed on 3 May 1983 under Contract No. DACW05-83-C-0084.

k. Emergency levee repairs at various locations on the right bank of the San Joaquin River in Reclamation Districts 2064, 2075 and 2094 was completed on 29 October 1997 by Ford, contractor, under Contract No. DACW05-97-C-0130. Specification No. 9896E, Drawing No. SJ-4-114.
1-06. Assurances Provided by Local Interest. Assurance of cooperation by local interests is provided by State Legislation as contained in Chapters 1 and 2, Part 4, Division 5 of the State Water Code (see paragraph 2-02a of the Standard Manual).

1-07. Transfer to or Acceptance by Local Interests. Responsibility for operating and maintaining portions of this unit was transferred to the State Reclamation Board by letter dated 7 December 1959. Other portions were officially accepted by the State Reclamation Board by letters dated 21 December 1962, 18 January 1963 and 2 December 1968.

1-08. Inspection Procedure. Since the enactment by State Legislation of Chapter 1528, Statutes of 1947, the Department of Water Resources, State of California, has made semi-annual inspections of all levees of authorized flood control projects in the Sacramento-San Joaquin Drainage basin pursuant to the Federal Regulations of 16 August 1944 (Title 33), and reports its findings to the local agency, the State Reclamation Board and the Sacramento District, Corps of Engineers, US Army. This activity, initiated pursuant to section 208.10(a) of the Federal Regulations, has in effect provided for transfer from the local agencies to the State Department of Water Resources the obligation of compliance with Sections 8371, 8372, and 8373 of the Water Code of the State of California. These sections of the Code require the local responsible agencies to submit a report to the State Department of Water Resources on or before 1 June of each year on the condition of the levees within their jurisdiction. Supervisory powers and duties of the Department are applicable to all works of the Lower San Joaquin River and Tributaries Flood Control Project maintained and operated by the local agencies without regard to status of completion, or expenditure of Federal funds on the construction of such works.

The following procedure is used in inspecting the levees of the responsible maintaining agency:

The personnel of the State Department of Water Resources make a detailed inspection in the spring and fall of each year and make a report on any required maintenance. The inspection objectives are to determine if the following items, which are a condensation of Federal Regulations, are being adhered to:

a. That all brush, trees and wild growth other than sod are removed from the levee crown and slopes.

b. That all weeds, grass and debris on the levee have been burned during the appropriate season, where not dangerous or impractical.

c. That all grass and weeds on the levee have been mowed where removal by burning is dangerous or impracticable. This applies only on peat levees or where burning would constitute a hazard to improvements.
d. That all burrowing animals have been exterminated.

e. That all caves, sloughs, burrows, holes, slips or other damaged portions of the levee have been repaired.

f. That all irrigation and drainage structures through the levee are in good working condition.

g. That no revetment work or riprap have been displaced, washed out or removed.

h. That the crown of the levee is well shaped and maintained and that unauthorized vehicular travel is restricted.

i. That stock grazing on the levee is restricted to conditions and seasons when the levee would not be seriously scarred or otherwise damaged thereby.

j. That encroachments are not being erected on the levee which would hinder travel by authorized patrol vehicles.

k. Prevent the erection of structures on, additions to, or alterations of, the levee unless authorized by permit from the State Reclamation Board.

Following this detailed inspection a joint field inspection is made with representatives of the responsible maintaining agency and the State Department of Water Resources to review and discuss the inspection report.

Upon completion of the fall inspection, the State Department of Water Resources publishes an annual report entitled, "Status of Project Levee Maintenance" which indicates the degree of proficiency attained by each obligated local agency in providing required maintenance.
SECTION II
FEATURES OF THE PROJECT SUBJECT TO FLOOD CONTROL REGULATIONS

2-01. Levees.

a. The levees described in this manual lie along the right bank of the San Joaquin River from Walthall Slough to the mouth of the Stanislaus River; and along the right bank of the Stanislaus River from its mouth to high ground, a total distance of about 22.08 miles. The levee has been reconstructed to project standards with a minimum crown width of 12 feet. The necessary drainage structures, road approaches, bank protection, and appurtenances were also included in the work. For more complete detail in construction of the above-mentioned levees, refer to the "As Constructed" drawings of EXHIBIT B.

b. For pertinent Requirements of the Code of Federal Regulations and other requirements, see the following:

(1) Maintenance - paragraph 4-02 of the Standard Manual.
(2) Suggested Check Lists - EXHIBIT E of this Supplement Manual.
(3) Operation - paragraph 4-04 of the Standard Manual.
(4) Special Instructions - paragraph 4-05 of the Standard Manual.

2-02. Drainage and Irrigation Structures. Drainage and irrigation structures which extend through the levees are listed as follows:

R.D. 2064 - Unit No. 2

Note on abbreviations:
L.S. = Landside
W.S. = Waterside

b. For pertinent Requirements of the Code of Federal Regulations and other requirements, see the following:

(2) Suggested Check Lists - EXHIBIT E of this Supplement Manual.
2-03. Channels.

a. Description. The main channels and floodways of the San Joaquin and Stanislaus Rivers for this unit lie adjacent to the levees as described in paragraph 1-02. The project design capacities of said channels are listed in paragraph 1-03 of this manual.

b. For pertinent Requirements of the Code of Federal Regulations and other requirements, see the following:

(2) Suggested Check Lists - EXHIBIT E of this Supplement Manual.

It shall be the duty of the local agency responsible for maintenance to keep in contact with the State Department of Water Resources' Flood Operation Center during all periods of flood danger, and maintain a patrol of the project works in their area during periods of flood in excess of a reading of 30.5 on the Vernalis gage.

The Flood Operation Center is responsible for Data Collection and issuance of a joint river forecast with the US Weather Bureau and coordinates with the Sacramento District Engineer and other agencies to keep apprised of the current situation in accordance with terms of the Memorandum of Understanding dated 1 November 1956, between the Division Engineer, US Army Engineer Division, South Pacific and the Director, Department of Water Resources, State of California for cooperative action during flood emergencies.

2-04. Miscellaneous Facilities

a. Description. Miscellaneous structures or facilities which were constructed as a part of, or in conjunction with, the protective works, and which might affect their functioning, include the following:

(1) Utility Relocation. Because of the nature of the construction of structures by local interests, records of utility relocations are not available.
(2) Hydrologic Facilities. Hydrologic facilities for this unit consists of the existing San Joaquin River Stream Gaging Station near Vernalis located on the left bank of the river 80 feet upstream from the Durham Ferry road bridge. This station is equipped with a staff gage and a continuous water stage recorder with an on-call type radio system for reporting stages to the Federal-State Control Center in Sacramento.

b. For pertinent Requirements of the Code of Federal Regulations and other requirements see the following:

(2) Suggested Check Lists - paragraph 7-03 of the Standard Manual.
SECTION III

REPAIR OF DAMAGE TO PROJECT WORKS AND METHODS OF COMBATING FLOOD CONDITIONS

3-01. Repair of Damage. In the event of serious damage to the project works, whether due to flood conditions or other causes, and which may be beyond the capability of local interests to repair, the local agency responsible for maintenance will contact a representative of the Department of Water Resources, State of California, who coordinates maintenance of project works of the Lower San Joaquin River and Tributaries Flood Control Project. The State representative will give assistance or advise, or will determine appropriate action to be taken.

3-02. Applicable methods of combating floods. For applicable methods of combating flood conditions, reference is made to Section VIII of the Standard Operation and Maintenance Manual where the subject is fully covered.
EXHIBIT A
FEDERAL FLOOD CONTROL REGULATIONS
(SEE STANDARD MANUAL)
TITLE 33 - NAVIGATION AND NAVIGABLE WATERS
 (as of June 30, 1952)
Chapter II - Corps of Engineers
Department of the Army
PART 206 - Flood Control Regulations
CHAPTER 1 - Operation of Flood Control Works

 Paragraph 206.10 - Local flood protection works; maintenance and operation of structures and facilities.

(a) General. (1) The structures and facilities constructed by the United States for local flood protection shall be maintained and operated in such a manner and at such times and places as may be necessary to obtain the maximum benefits.

(b) The State, political subdivision therefor, or other responsible local agency, which furnished assurance that it will maintain and operate flood control works in accordance with regulations prescribed by the Secretary of the Army, as hereinafter defined, shall appoint a permanent committee consisting of, or headed by, an official hereinafter called the "Superintendent," who shall be responsible for the development, maintenance of, and directly in charge of, an organization responsible for the efficient operation and maintenance of all of the structures and facilities during flood periods, and for continuous inspection and maintenance of the project works during periods of low water, all without cost to the United States.

(c) A reserve supply of materials necessary for a project during a flood emergency shall be kept on hand at all times.

(d) No encroachment or trespass which will adversely affect the efficient operation or maintenance of the project works shall be permitted upon the right-of-way for the protective facilities.

(e) No riprap, timbers, or other material shall be placed over, under, or on the walks, levees, improved channels or floodways, nor shall any alteration or construction be permitted within the limits of the project works without prior determination by the Secretary of the Army or his authorized representative that such construction or alteration will not adversely affect the function of the protective facilities. Such improvements or alterations as may be found to be desirable and permissible under the above determination shall be constructed in accordance with standard engineering practice. Advice regarding the effect of proposed improvements or alterations on the function of the project and in accordance with standards of construction acceptable under standard engineering practice shall be obtained from the District Engineer or, if otherwise authorized by the Secretary of the Army, from any official possessing such standards of construction.

(f) It shall be the duty of the Superintendent to submit a semiannual report to the District Engineer stating inspection, maintenance, and operation of the protective structures and facilities.

(g) The District Engineer or his authorized representatives shall have access to and shall have inspections of all portions of the protective works.

(h) Maintenance measures or repairs which the District Engineer deems necessary shall be performed as soon as possible.

(i) Appropriate maintenance measures shall be taken by federal authorities to assure that all federal organizations employing public or private facilities connected with the project works are coordinated with those of the Superintendent's organization.

(j) The Department of the Army will furnish local interments with an Operation and Maintenance plan for each completed project, or separate useful part thereof, together with information covering their obligations under this part.

(k) Levees - (1) Maintenance. The Superintendent shall provide at all times such maintenance as may be required to assure serviceability of the structures in time of flood. Measures shall be taken to promote the growth of sod, external smoothing and vegetation on the levee, and provide for routine mowing of the grass and weeds, removal of wild growth and drift deposits, and repair of damage caused by erosion or other forces. Where practicable, levees shall be kept to a standard height to retard bank erosion by planting of willows or other suitable growth on areas of erosion of the levees. Periodic inspections shall be made by the Superintendent to insure that such maintenance measures are being effectively carried out and, further, to be certain that:

(i) No vegetation, sodding, or material loss of erode or levee cross sections has taken place;

(ii) No caving has occurred on either the landward or waterward side of the levee which might affect the stability of the levee section;

(iii) No seepage, saturated areas, or sand boils are occurring;

(iv) Toe drainage systems and pressure relief wells are in good workings and that areas are not becoming clogged;

(v) In case of the levees and gates and on said drains are in good working condition;

(vi) No revetment work or riprap has been displaced, washed out, or removed;

(vii) No vegetation is being taken, such as burning grass and weeds during inappropriate seasons, which will retard or destroy the growth of sod;

(viii) Access roads to and on the levees are being properly maintained;

(ix) Cattle guards and gates are in good condition;

(x) Crown of levee is shaped so as to drain readily, and roadway thereon, if any, is in a well-maintained condition.

(xii) There is no unauthorized grazing or vehicular traffic on the levees;

(xv) Encroachment or alteration of the levee right-of-way which might weaken or hinder the structure and proper and efficient functioning during times of emergency.

(xvi) Such inspections shall be made immediately prior to the beginning of the flood season, immediately following each major high water period, and otherwise at intervals not exceeding 90 days, and such intermediate times as may be necessary to insure the best possible care of the levee and efficient operation of the structures.

(xvii) In case of the levee, immediate steps will be taken to correct dangerous conditions disclosed by such inspection. Maintenance repairs shall be accomplished during the appropriate season as scheduled by the Superintendent.

(2) Operation. During flood periods the levee shall be continuously to locate possible sand boils or unusual wetness of the landward slope and to be certain that:

(i) There are no indications of slides or sloughs developing;

(ii) Wave wash or scouring action is not occurring;

(iii) No revetment, or levee section, are overtopped by wave action;

(iv) No stream erosion exist which might endanger the structure.

Appropriate advance measures will be taken to prevent loss of ability of adequate labor and materials to meet all contingencies. Immediate steps will be taken to control any condition which endangers the structure or the damaged section.

(c) Flood works - (1) Maintenance. Periodic inspections shall be made by the Superintendent to be certain that:

(i) No encroachments of any kind or sand boils are occurring;

(ii) No vegetation, seepage, or sand boils are occurring;

(iii) No erosion exist which has occurred which affects the stability of the wall or its water tightness;

(iv) No vegetation, seepage, or sand boils are occurring;

(v) No erosion, the roots of which might extend under the wall and offer arrested seepage, are occurring;

(vi) The concrete has not undergone cracking, chipping, or spalling to an extent which might affect the stability of the wall or its water tightness;

(vii) There are no encroachments upon the right-of-way which might endanger the structure or hinder its functioning in time of flood;

(viii) Care is being exercised to prevent trash, debris, and vegetation from depositing or floating to and against or adjacent to, wall, and to insure that no fires are being built near them;

(ix) No bank caving conditions exist which might endanger the stability of the wall;

(x) No toe drainage systems and pressure relief wells are over the toe, and that such facilities are not becoming clogged;

(xi) Toe drainage systems and pressure relief wells are in good working condition and that areas are not becoming clogged;

(xii) To protect the toe, the toe drainage systems and pressure relief wells are in good working condition and that cleaning of the toe is required;

(xiii) Access roads and levees are properly maintained;

(xiv) Encroachment or alteration of the levee right-of-way which might weaken or hinder the structure and proper and efficient functioning during times of emergency.

(xv) Such inspections shall be made immediately prior to the beginning of the flood season, immediately following each major high water period, and otherwise at intervals not exceeding 90 days. Where drainage structures are provided with stop log or other emergency closure devices, such equipment and its housing shall be inspected regularly. The inspection of the emergency closure shall be made at least once each year. Periodic inspections shall be made by the Superintendent to be certain that:

(i) Pipelines, operating mechanism, riprap, and headwalls are in good condition;

(ii) Inlet and outlet channels are open;

(iii) Care is being exercised to prevent the accumulation of trash and debris near the structures and that no fires are being built near them;

(iv) Erosion is not occurring adjacent to the structure which might endanger its water tightness or stability.

Immediate steps will be taken to repair damage, replace broken parts, or remedy adverse conditions disclosed by such inspections.

(3) Operation. Whenever high water conditions impend, all gates will be inspected a short time before the water reaches the invert of the pipe and any object which might prevent proper closure shall be removed. Automatic gates shall be closed whenever possible; and, in cases where they are not actuated, continue to be closed. The gates shall be operated under the direction of the Superintendent.
equipment removed from the stations for repair or replacement shall be returned or replaced as soon as practicable and shall be trial run after reinstallation. Repairs requiring removal of equipment from the plant shall be made during off-flood seasons insofar as practicable.

(2) Operation. Competent operators shall be on duty at pumping plants whenever it appears necessary for pump operation is imminent. The operator shall thoroughly inspect, trial operate, and place in service all plant equipment. The operator shall be familiar with the equipment, manufacturer's instructions and drawings and with the “Operating Instructions” for each station. The equipment shall be operated in accordance with the above-mentioned “Operating Instructions” and care shall be exercised that proper lubrication is being supplied all equipment, and that no overheating, undue vibration or noise is occurring. Immediately upon final refilling of flood waters, the pumping station shall be thoroughly cleaned, pump house sumps flushed, and equipment thoroughly inspected, oiled and greased. A record or log of pumping plant operation shall be kept for each station, a copy of which shall be furnished the District Engineer following each flood.

(g) Channels and Floodways — (1) Maintenance. Periodic inspections of improved channels and floodways shall be made by the Superintendent to be certain that:

(i) The channel or floodway is clear of debris, weeds, and wild growth;
(ii) The channel or floodway is not being restricted by the depositing of waste materials, building of unauthorized structures or other encroachments;
(iii) The capacity of the channel or floodway is not being reduced by the formation of shoals;
(iv) Banks are not being damaged by rain or wave wash, and that no sloughing of banks has occurred;
(v) Riprap sections and deflection dikes and walls are in good condition;
(vi) Approach and curve channels adjacent to the improved channel or floodway are sufficiently clear of obstructions and debris to permit proper functioning of the project works.

Such inspections shall be made prior to the beginning of the flood season and otherwise at intervals not to exceed 60 days. Immediate steps will be taken to remedy any adverse conditions disclosed by such inspections. Measures will be taken by the Superintendent to promote the growth of grass on bank slopes and earth deflectors. The Superintendent shall provide for periodic repair and cleaning of debris basins, check dams, and related structures as may be necessary.

(2) Operation. Both banks of the channel shall be patrolled during periods of high water, and measures shall be taken to protect those reaches being attacked by the current or by wave wash. Appropriate measures shall be taken to prevent the formation of jams of ice or debris. Large objects which become lodged against the bank shall be removed. The improved channel or floodway shall be thoroughly inspected immediately following each major high water period. As soon as practicable thereafter, all snags and other debris shall be removed and all damage to banks, riprap, deflection dikes and walls, drainage outlets, or other flood control structures repaired.

(h) Miscellaneous facilities — (1) Maintenance. Miscellaneous structures and facilities constructed as a part of the protective works and other structures and facilities which function as a part of, or affect the efficient functioning of the protective works, shall be periodically inspected by the Superintendent and appropriate maintenance measures taken. Damaged or unserviceable parts shall be repaired or replaced without delay. Areas used for ponding in connection with pumping plants or for temporary storage of interior run-off during flood periods shall not be allowed to become filled with silt, debris, or dumped material. The Superintendent shall take proper steps to prevent restriction of bridge openings and, where practicable, shall provide for temporary raising during flood of bridges which restrict channel capacities during high flows.

EXHIBIT E
Sheet 2 of 7
Instruction for Completing Sheet 2, Exhibit E
(To be printed on back of Sheet 2)

Item (a) Indicate levee station of observation, obtained by pacing from nearest reference point; indicate right or left bank.

Item (b) If sufficient settlement of earthwork has taken place to be noticeable by visual observation, indicate amount of settlement in tenths of a foot. If sloughing has caused a change in slope of the embankment sections, determine the new slope. Note areas where erosion or gullying of the section has occurred.

Item (c) If sufficient erosion or gullying of back face of back toe of levee has taken place to be noticeable by visual inspection, indicate area affected and depth.

Item (d) Note any natural change in any section of roadway or ramps. Indicate any inadequacy in surface drainage system.

Item (e) Indicate any evidence of seepage through the embankment section.

Item (f) Indicate the serviceability of all farm gates across the embankments and roadway, and indicate if repainting is required.

Item (g) Indicate maintenance measures that have been performed since last inspection and their condition at the time of this inspection.

Item (h) Record opinion, if any, of contributory causes for conditions observed and also any observations not covered under other columns.

NOTE: One copy of the Inspector's Report is to be mailed to the District Engineer immediately on completion, and one copy is to be attached to and submitted with the Superintendent's semi-annual report.

EXHIBIT E
Sheet 4 of 7
Instructions for Completing Sheet 4, Exhibit E
(To be printed on back of Sheet 4)

Item (a) Indicate station of observation obtained by pacing from nearest reference point.

Item (b) Note nature, extent, and size of vegetal growth within the limits of flood flow channel.

Item (c) Note nature and extent of debris and refuse that might cause clogging of the conduits of the irrigation intake works, fouling of the tainter gates, or the bridges over the channel.

Item (d) Report any construction along the diversion channel or above the diversion channel or above the diversion works that has come to the attention of the inspector and that might affect the functioning of the project.

Item (e) Indicate any change in grade or alignment of the channels, either by deposition or sediment or scour, that is noticeable by visual inspection. Estimate amount and extent.

Item (f) Indicate any change that has taken place in the riprap such as disintegration of the rock, erosion, or movement of the rock. Note the presence of vegetal growth through the riprap.

Item (g) Note any damage or settlement of the footings of the bridges. Indicate condition of wooden structures and if repainting is required. Indicate condition of bridge approaches, headwalls, and other appurtenances.

Item (h) Indicate maintenance measures that have been performed since the last inspection and their condition at time of this inspection.

Item (i) Record opinion, if any, of contributory causes for conditions observed, also any observations not covered under other columns.

NOTE: One copy of the Inspector's Report is to be mailed to the District Engineer immediately on completion and one copy is to be attached to and submitted with the superintendent's semi-annual report.

San Joaquin River - Right Bank
(As listed in Paragraph 2-02)

Stanislaus River - Right Bank
(As listed in Paragraph 2-02)
Instruction for Completing Sheet 6, Exhibit E
(To be printed on back of Sheet 6)

(1) Enter station of all structures under Column (a) for check list.

(2) Inspect inlet, barrel, and outlet for accumulation of sediment, rubbish, and vegetal matter. Note condition under Column (c).

(3) If any settlement or damage to the pipe, barrel, or invert of the drain has occurred, estimate the location and amount. Note particularly if any backfill has come into the pipe or been disturbed. Record observations under Column (d).

(4) Inspect the concrete portions of the structures for evidence of settlement, cracks, "pop-outs", spaces, abrasive wear, or other deterioration. Record conditions under Column (e).

(5) Inspect backfill area adjacent to structure for evidence of erosion caused by overflow of the drainage structure and note conditions in Column (f).

(6) Under Column (g) indicate physical measures that have been taken to correct conditions reported in last inspection, and their condition at time of this inspection.

(7) Under Column (h) record opinion, if any, of contributory causes for conditions observed, also any observations not covered under other columns.

(8) A copy of the inspector's report is to be mailed to the District Engineer immediately on completion, and a record copy shall be attached to the Superintendent's semi-annual report.
EXHIBIT F

LETTERS OF TRANSFER TO OR

ACCEPTANCE BY LOCAL INTERESTS
Ms. Leslie M. Gallagher  
Executive Officer  
Central Valley Flood Protection Board  
3310 El Camino Avenue, Room 151  
Sacramento, CA  95821

Dear Ms. Gallagher:

The purpose of this letter is to notify the Central Valley Flood Protection Board of the completion of an effort to update the Operation and Maintenance Manual Supplements for the Sacramento River Flood Control Project and the Lower San Joaquin River Levees and Lower San Joaquin River and Tributaries Project. These updates are a compilation of revisions made to the project over time and where we had record of a transfer letter to the Board. These updated supplements are the most current version and should be utilized as the baseline version for any future project modifications.

This process and the compiled updates have been coordinated with the Central Valley Flood Protection Board and Department of Water Resources staffs for review and comment. All comments have been addressed or incorporated into the manuals.

The Board staff has been provided a copy of the manuals in electronic format. Future updates will include entire unit supplements so updates can be seen in context with the entire unit supplement. The list of completed supplements, by the unit number and title, are attached. If you have any questions regarding this transmittal, please contact Gary Kamei at 916-557-6845.

Sincerely,

[Signature]
David G. Ray, P.E.  
Colonel, U.S. Army  
District Commander

Sacramento 14, California

Gentlemen:

Reference is made to the joint inspection made on 16 November 1959 of certain levee sections pertaining to the Lower San Joaquin River and Tributaries Project for the purpose of transferring them to the State of California for operation and maintenance.

The required work, consisting of levee construction and bank protection, is completed in accordance with Specification 2565, Contract No. DA-04-167-CIVENG-59-131 and Drawing No. 7-4-1588. The levee sections referred to above, located on the San Joaquin River at Priority sites, are listed as follows:

<table>
<thead>
<tr>
<th>LEVEE SECT NO.</th>
<th>SITE NO.</th>
<th>BANK</th>
<th>RIVER MILE POINTS</th>
</tr>
</thead>
<tbody>
<tr>
<td>35</td>
<td>E</td>
<td>Right</td>
<td>61.35 to 61.52 and 61.67 to 61.82</td>
</tr>
<tr>
<td>36</td>
<td>B</td>
<td>Left</td>
<td>65.63 to 65.84</td>
</tr>
<tr>
<td>37</td>
<td>C</td>
<td>Right</td>
<td>66.02 to 66.15</td>
</tr>
</tbody>
</table>

The levee sections Nos. 35 to 37 inclusive, described above, now meet the requirements of the Lower San Joaquin River and Tributaries Project. Therefore, said levee sections, together with the waterway banks contiguous thereto, are hereby transferred to the State of California for operation and maintenance.

The maintenance work required under the provisions of the Lower San Joaquin River and Tributaries Project shall be performed in accordance with existing Flood Control Regulations, inclosed herewith, which have been prescribed by the Secretary of the Army pursuant to Section 3 of the Act of Congress, approved 22 June 1936, as amended and supplemented by a

Gentlemen:

Reference is made to the joint inspection made on 19 November 1962, of flood control work pertaining to the Lower San Joaquin River and Tributaries Project for the purpose of transferring it, upon completion, to the State of California for operation and maintenance.

The above work, designated as Unit No. 67, consists of levee construction and bank protection on the right bank of San Joaquin River from mile point 62.02 to 62.21, including shaping and surfacing 300 feet of levee crown. This work was completed on 6 November 1962, in accordance with Specification No. 2855, Contract No. MA-04-167-CIVEMI-63-3b, and Drawing No. 7-4-1671.

The flood control work described above now meets the requirements of the Lower San Joaquin River and Tributaries Project. Therefore, said flood control work together with the waterway banks contiguous thereto, are hereby transferred to the State of California for operation and maintenance.

The maintenance work required under the provisions of the Lower San Joaquin River and Tributaries Project shall be performed in accordance with existing Flood Control Regulations, included herewith, which have been prescribed by the Secretary of the Army pursuant to Section 3 of the Act of Congress approved 22 June 1936, as amended and supplemented by a Standard Operation and Maintenance Manual for the Lower San Joaquin River and Tributaries Project. As provided under Paragraph 205.19(10) of these regulations, a supplement to the Standard Operation and Maintenance Manual covering these units of work will be furnished to you upon completion.

Gentlemen:

Reference is made to the joint inspection made on 19 November 1962 of flood control work pertaining to the Lower San Joaquin River and Tributaries Project for the purpose of transferring it, upon completion, to the State of California for operation and maintenance.

The above work, designated as Unit No. 68, consists of levee construction, bank protection and surfacing of levee crown on the right bank of San Joaquin River from mile point 57.15 to 62.02. This work was completed on 10 January 1963, in accordance with Specification 2735, Contract No. DA-04-167-CAVEN-62-68, and Drawing No. 7-4-1643. The navigation and pumping plant structure on Walthall Slough is not included in this transfer. This structure will be transferred at a later date upon its completion.

The flood control work described above now meets the requirements of the Lower San Joaquin River and Tributaries Project. Therefore, said flood control work together with the waterway banks contiguous thereto, are hereby transferred to the State of California for operation and maintenance.

The maintenance work required under the provisions of the Lower San Joaquin River and Tributaries Project shall be performed in accordance with existing Flood Control Regulations, enclosed herewith, which have been prescribed by the Secretary of the Army pursuant to Section 3 of the Act of Congress approved 22 June 1936, as amended and supplemented by a Standard Operation and Maintenance Manual for the Lower San Joaquin River and Tributaries Project. As provided under Paragraph 208.10(19) of these regulations, a supplement to the Standard Operation and Maintenance Manual covering these units of work will be furnished to you upon completion.

1416 - 9th Street, Room 1335
Sacramento, California 95814

Gentlemen:

Reference is made to the joint inspection of 26 and 27 February 1968, made for the purpose of transferring a completed portion of the flood control work on the Lower San Joaquin River and Tributaries Project to the State of California for operation and maintenance.

The flood control work consists of levee enlargement, levee construction, levee setback, shaping levee crown, bank sloping and stone protection on the right bank of the San Joaquin River between approximate River Miles 62.21 & 74.75; and the right bank of the Stanislaus River between approximate River Miles 0.0 & 9.29. The work unit No. 82, as shown on the attached enclosure, was completed on 10 March 1968, in accordance with Specification No. 3942, Contract No. MA-04-167-CIVENG-66-103, and Drawing No. 7-4-1085.

The work was performed under the general authority of the Lower San Joaquin River and Tributaries Project, which was authorized by the Flood Control Act of 1944, 78th Congress, 2nd Session.

The completed flood control work as described in the attached enclosure now meets the requirements of the Lower San Joaquin River and Tributaries Project. Therefore, said flood control work, together with the waterway banks contiguous thereto, are hereby transferred to the State of California for operation and maintenance.

The maintenance work required under the provisions of the Lower San Joaquin River and Tributaries Project shall be performed in accordance with the enclosed Flood Control Regulations. These regulations have been prescribed by the Secretary of the Army pursuant to Section 3 of the Act of Congress approved 22 June 1936, as amended and supplemented by a Standard
Operation and Maintenance Manual for the Lower San Joaquin River and Tributaries Project. As provided under Paragraph 208.19(10) of these regulations, a supplement to the Standard Operation and Maintenance Manual covering the above work will be furnished to you upon completion.

Gentlemen:

You are hereby notified that the Corps of Engineers has completed emergency repairs on the project levee in Reclamation District 2064 under the authority of Section 5 of the Flood Control Act of 18 August 1941, as amended (Public Law 99, 54th Congress, 1st Session). The work was completed on 20 November 1980 and consisted of reconstructing 1000' of the project levee along the right bank of the San Joaquin River, in accordance with Contract No. DACW05-81-C-0021, Drawing No. 7-4-1838 and Specification No. 3985.

The Lower San Joaquin River and Tributaries Project Standard Operation and Maintenance Manual and the Supplement thereto for Unit 3 covers this area. The completed work shall be maintained in accordance with the assurances which your Board provided for the Lower San Joaquin River and Tributaries Project.

Sincerely,

PAUL F. KAVANAUGH

Members of the Board:

You are hereby notified that the Corps of Engineers has completed emergency work in R.D. 2064 under authority of Section 5 of the Flood Control Act of August 18, 1941, as amended (Public Law 99, 84th Congress, 1st Session). The work was completed on April 11, 1983 and consisted of restoring a levee break along the San Joaquin River, right bank, upstream of Airport Way in accordance with Contract Number DACW05-83-C-0075. Additional work was completed on May 3, 1983 for restoring a deliberate levee break along the same levee downstream of Airport Way in accordance with Contract Number DACW05-83-C-0084.

This work shall be maintained in accordance with the assurance which your Board provided for the Lower San Joaquin River and Tributaries Project. This portion of the work will be added by amendment to the supplement to Standard Operation and Maintenance Manual, Unit Number Three, Lower San Joaquin River and Tributaries Project. Copies will be furnished your office at a later date.

Sincerely,

Arthur E. Williams

Dear Mr. Rabbon:

This letter is to transfer a portion of work on the right levee of the San Joaquin River from Levee Mile 0.00 at the north boundary of RD 2075 to L.M. 7.38 at the south boundary of RD 2075 in RD 2075, to the State of California for operation and maintenance.

The work consisted of restoring the following areas damaged by the January 1997 Flood. Wave wash damaged areas were excavated, levee fill was placed and compacted, and the slope was reshaped to pre-flood configuration from L.M. 0.00 to 1.36, L.M. 1.45 to 1.77, L.M. 2.26 to 2.73, L.M. 2.83 to 2.87, L.M. 3.77 to 4.17, and L.M. 6.97 to 7.05. The levee slope was restored to pre-flood condition between L.M. 1.77 and 2.26. Levee fill material was placed and compacted and the slope was restored to pre-flood configuration from L.M. 2.78 to 2.83, L.M. 2.87 to 3.77, L.M. 4.17 to 4.58, L.M. 5.05 to 5.27, and 5.88 to 5.93. The landside berm was repaired with gravel, extending 100-feet upstream and downstream from the existing berm, between L.M. 5.90 and 6.10. The work as listed in the enclosure was completed on Oct. 29, 1997 in accordance with Specification No. 9896E, Drawing File No. SJ-4-114, Contract No. DACW05-97-C-0130.

The work was performed under the general authority of 33 U.S.C. 701n (69 Stat. 186) PL 84-99 and now meets the requirements of the San Joaquin River in RD 2075. Therefore, said flood control work, together with the waterway banks contiguous thereto, are transferred as of the date of this letter to the State of California for operation and maintenance.

This portion of the project work will be added by amendment to the Operation and Maintenance Manual, San Joaquin River Flood Control Project.

Sincerely,

Michael J. Walsh
Colonel, Corps of Engineers
District Engineer

Mr. Peter D. Rabbon, General Manager  
The Reclamation Board  
State of California  
1416 9th Street, Room 1601  
Sacramento, California, 95814

Dear Mr. Rabbon:

This letter is to transfer a portion of work on the right bank levee of the San Joaquin River from River Junction Road to the Stanislaus River in Unit 1 and a portion of the right bank of the Stanislaus River from its junction with the San Joaquin River to Austin Road in Unit 2, in RD 2064, to the State of California for operation and maintenance.

The work consisted of restoring areas damaged by the January 1997 Flood, all on the landside. The right levee of the San Joaquin River in Unit 1 was restored by excavating the levee section to a depth of 10-feet and placing and compacting levee fill at Levee Mile 0.04-0.49 and 0.66-0.69. Levee fill material was placed and compacted and the slopes were restored to pre-flood configuration at Levee Mile 0.69-1.11, 1.11-1.17, 2.18-2.69, 3.43-3.50, 3.60-3.91, and 4.19-5.00. Unit 2 was restored by excavating the levee section to a depth of 8½-feet, placing and compacting levee fill material, and reshaping slopes to pre-flood configuration. In addition, the landside berm in Unit 1 was repaired with gravel installed over geotextile at Levee Mile 2.55-2.74 and 3.12-3.51 to an average thickness of 2½-feet-deep and 50-feet-wide, and in Unit 2 to a width of 40-feet at Levee Mile 0.55-0.80 and to a width of 50-feet at Levee Mile 1.84-1.93 and 3.29-3.51. The work, as listed in the enclosure, was completed on October 29, 1997 in accordance with Specification No. 9896E, Drawing File No. SJ-4-114, Contract No. DACW05-97-C-0130.

The work was performed under the general authority of 33 U.S.C. 701n (69 Stat. 186) PL 84-99 and now meets the requirements of the Operations and Maintenance Manual for the San Joaquin River Flood Control System in RD 2064. Therefore, said flood control work, together with the waterway banks contiguous thereto, are transferred as of the date of this letter to the State of California for operation and maintenance.

This portion of the project work will be added by amendment to the Operation and Maintenance Manual, San Joaquin River Flood Control Project.

Sincerely,

Michael J. Walsh

Mr. Peter D. Rabbon, General Manager
The Reclamation Board
State of California
1416 9th Street, Room 1601
Sacramento, California, 95814

Dear Mr. Rabbon:

This letter is to transfer a portion of work on the right levee of the San Joaquin River from Levee Mile 0.00 (boundary of RD 2096) to Levee Mile 2.82 in Unit 1 in RD 2094, to the State of California for operation and maintenance.

The work consisted of restoring areas damaged by the January 1997 Flood, all on the landside of the right levee of the San Joaquin River in Unit 1. Levee fill material was placed and compacted in wavewash-damaged areas to restore the slopes to pre-flood configuration on L.M. 0.23-0.35 and L.M. 0.35-0.50. Levee fill material was excavated to 6-feet-deep, placed and compacted to restore the slope to 2 horizontal to 1 vertical on L.M. 0.73-0.85. The levee was excavated to 5-feet-deep, levee fill material was placed and compacted in wavewash damaged areas and the slopes were restored to 3 horizontal to 1 vertical on L.M. 0.85-0.92 and L.M. 1.01-1.51. The levee was excavated to 6.5-feet-deep, levee fill material was placed and compacted in wavewash damaged areas and the slope was restored to 3.1 horizontal to 1 vertical on L.M. 1.51-2.20 and L.M. 2.20-2.24. Levee fill material was placed and compacted in wavewash-damaged areas and the slope was restored to pre-flood configuration on L.M. 2.24-2.75. The work as listed in the enclosure was completed on October 29, 1997 in accordance with Specification No. 9896E, Drawing File No. SJ-4-114, Contract No. DACW05-97-C-0130.

The work was performed under the general authority of 33 U.S.C. 701n (69 Stat. 186) PL 84-99 and now meets the requirements of the Operations and Maintenance Manual for the San Joaquin River Flood Control System in RD 2094. Therefore, said flood control work, together with the waterway banks contiguous thereto, are transferred as of the date of this letter to the State of California for operation and maintenance.

This portion of the project work will be added by amendment to the Operation and Maintenance Manual, San Joaquin River Flood Control Project, which is being transferred under separate cover.

Sincerely,

Michael J. Walsh

Dear Colonel Conrad:

In Colonel Michael J. Walsh's letter of January 26, 2001 to The Reclamation Board, the U.S. Army Corps of Engineers transferred the repaired right-bank levee of the San Joaquin River at Levee Mile 0.00 to LM 7.38 (in Reclamation District No. 2075) to the State of California for operation and maintenance. You advised the Board that the completed repairs would be added by amendment to the Operation and Maintenance Manual, San Joaquin River Flood Control Project. We understand that the repairs were completed in accordance with the original plans and specifications. We acknowledge receipt of as-constructed plans and will forward a copy to RD 2075.

The Board, on behalf of the State of California, accepted the completed repairs at its February 15, 2002 meeting and transferred the San Joaquin River levee repairs to RD 2075. Until the Corps provides the O&M Manual amendment, RD 2075 will perform operation and maintenance according to the current manual.

If you have any questions, you may contact Peter Rabbon, General Manager of The Reclamation Board, at (916) 653-5434, or your staff may contact Mel Yarwood, Acting Chief of the Department of Water Resources' System Integrity Section of the Division of Flood Management, at (916) 574-0367.

Sincerely,

Betsy A. Marchand

SUGGESTED SEMI-ANNNUAL REPORT FORM
Dear Sir:

The semi-annual report for the period (1 May 19__ to 31 October 19__) (1 November 19__ to 30 April 19__) Unit No. 3 of the Lower San Joaquin River and Tributaries Project is as follows:

a. The physical condition of the protective works is indicated by the inspector's report, copies of which are inclosed, and may be summarized as follows:

(Superintendent's summary of conditions)

It is our intention to perform the following maintenance work in order to repair or correct the conditions indicated:

(Outline the anticipated maintenance operations for the following 6 months.)

b. During this report period, high water periods (water level in excess of 30.5 feet on the gage on the San Joaquin River at Vernalis) occurred on the following dates:

<table>
<thead>
<tr>
<th>Dates</th>
<th>Maximum Elevation</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>
Comments on the behavior of the protective works during such high water periods are as follows:

(Superintendent's log of flood observations)

During the high water stages when the water level at Vernalis gage reached a height of ____________, on the gage or excess thereof (Dates) ________________, it was necessary to organize and carry out flood operations as follows:

(See Maintenance Manual ________________.)

c. The inspections have indicated (no) or (the following) encroachments or trespasses upon the project right-of-way.

d. (No) (______________) permits have been issued for (the following) improvements or construction within the project right-of-way.

Executed copies of the permit documents issued are transmitted for your files.

e. The status of maintenance measures, indicated in the previous semi-annual report as being required or as suggested by the representatives of the District Engineer, is as follows:

(Statement of maintenance operations, item by item with percent completion.)

f. The fiscal statement of the Superintendent's operations for the current report period is as follows:
